

Scope of Work

**This is a material estimate based on information supplied by the contractor. Contractor is responsible for determining building measurements, specific material needs, and final material requirements for orders. Also, sales tax, freight, and warranty may or may not be included*

Job Name:	
Job Description:	
Warranty Requested:	
Square Footage:	
Location:	

Project Steps

Step 1: Power wash and remove any loose debris of existing roofing products.

Step 2: Apply RC-2250 to all horizontal seams, fasteners, penetrations, curbs, or any other potential leak points. One gallon will cover 50 linear feet at 6" wide band. Any existing product will need to be encapsulated and pass the edge of existing material.

Step 3: Apply a base coat (refer to Design Guideline)

Step 4: Apply a top coat (refer to Design Guideline)

Step 5: Submit to info@inlandcoatings.com for review
